

## LAMP LIGHTING GUIDE

Table Lamps, Desk Lamps, and Floor Lamps are an easy way to add style and ambiance to your new or already existing interior; or even exterior lighting space. Does your space look and feel a little dull? Maybe you have a hard time getting ample light when sitting down to do tasks like reading, working, or studying.

Before looking to add ceiling lights or any other lights that require an electrician to work on your home or space...why not add a simple lamp into the mix!

### LAMP TYPES

There are three main categories of lamps, and each has many use cases in which they are designed and intended to be used.

**CURREY AND COMPANY**  
Currey and Company I  
6000-0780 I Frey Collection  
I Bronze / Dark I One  
Light Desk Lamp

#### DESK LAMPS

Desk Lamps are typically used for what they are named for, a desk. Depending on the setting, choosing a desk lamp should primarily focus on functionality. Desk lamp selection focuses on adjustability and control systems.

Adjustability  
Priority

Control  
Systems

**CURREY AND COMPANY**  
Currey and Company I  
6000-0802 I Bessbrook  
Collection I Bronze / Dark  
I One Light Table Lamp

#### TABLE LAMPS

Table lamps can be used in any room or setting. For instance, adding a low-profile buffet-style lamp to your hallway or entryway table is a nice way to add elegance and detail to your space. Table lamps enhance lighting and visual appeal in living spaces.

Lighting

### LAMP OPTIONS

There are some options when it comes to lamps and what they offer besides the light you need them for

**LED Integrated:**  
Many do not want to worry about light bulbs anymore, and integrated options are a great way to do so. To look for a lamp with an integrated LED light source, simply look for lamps that do not have sockets.

**Dimmer Switch:**  
Dimming is an important feature for most people, why? Lighting is not just off/on anymore, whether you're hosting an event, relaxing, matching the time of day, or just want less or more light for any given circumstance

**Switch Location and Switch Type:**  
Everyone loves convenience and user mindfulness in design. Choosing a lamp with easy "on/off" switches and buttons is an important feature that some just get stuck with when a lamp is purchased.

**Touch Sensor Controls:**  
A new feature with lamps of all categories is a touch sensor switch. You can tap and move your finger as if you were touching a touchscreen phone

**Built-in outlet:**  
Lamps with built-in outlets are simply convenient for people wanting to plug in something like a laptop, phone charger, or anything else that may need power/charging while using or not using the lamp.

**"Old Fashioned" 3-way bulb**  
With more modern control systems and switches, this is not as typical anymore, but for socket-based lamps, a 3-way bulb is still a thing! Select the wattage and voltage your lamp specs call for and if the socket supports this type of bulb. You will simply have three lighting intensity options and you modify this by the switch that is built into the socket!

### BUDGETING

Depending on the allotted budget, whether starting out with a new space or amping up an already existing space, there are a couple of things to keep in mind among functionality being #1. Usually, lamps come as an afterthought or are not really budgeted in a home "Lighting Budget." The price of lamps can fluctuate depending on materials, source (brand), LED integrated or not, and the options we discussed above. Originality, handmade aspects, and uniqueness can also cause price fluctuations.

### SIZE

Choosing the right size lamp whether it be on a table or floor is highly important. Find the maximum height you can comfortably add to the space. The only thing from a width standpoint is the shade (if there is shade) and sometimes the base body. Shades sometimes take up more space than intended. Visualize and place your lamp(s) in the spaces you desire, do not guess. For a floor lamp, think about how and why you are placing that lamp there.

### WHY BUTLER?

We offer tons of options for table lamps, floor lamps, and desk lamps for all spaces online and in our showrooms! Our lighting showrooms have countless lamps to look at in person. Often lamps are more realistic to buy in person because you have those to see and touch what you are buying and you want to make sure it has those options you desire! Some may not have access to a showroom, allow us to walk you through or collaborate with you on what exactly you are looking for and why you are looking for it!

### LAMP GUIDE FAQs

#### What to Consider when Buying a Lamp?

When looking to buy a lamp, it is essential to take into account several key considerations. These may include: the size and style of the lamp, the type of bulb you want to use, the brightness and color temperature of the light, the intended use of the lamp, and the power source.

#### Can I use LED Bulbs in my Lamp?

Yes, you can use an LED bulb in just about any socket. There are no "compatibility" obstacles. The only obstacle is having a dimmer that is properly matched with your LED bulb.

#### What are some Important Features of Lamps?

There are several important features to consider when choosing a lamp, including its size and shape, the type of bulb it uses, the type of light it provides, and its level of adjustability. Also, consider the lamp's material, maintenance, and cleaning ease.

#### What are Three Factors that Could Alter the Average Rated Life of a Lamp?

Usage patterns, like how often the lamp is turned on and off and how long it is left on each time, can also affect its rated life.

#### How do you Pick the Right Lamp?

The right lamp for you will depend on several factors, including your personal style and the purpose of the room. Here are some things to consider when selecting a lamp: (Room Function), (Size), (Style), and (Light Quality)
